Martin J Silverthorne

Make $10,000 Every Week With the Target 7 Craps Strategy

Silverthorne Publications, Inc.
How This Manual Will Help You

To understand how to use the *Target 7 Craps Strategy*, you will need to read the manual and practice using the strategy.

The goal of this book is simple – to help you set up your own craps money machine using the *Target 7 Craps Strategy* to make at least $10,000 every week!
You Can Make $500 an Hour or More Play Craps!

"If You Would Like to Make From $161.80 to $3,326.65 an hour, safely, quickly and in the most pleasant way you can imagine, then the Target 7 Craps Strategy is for you!"

In this publication, I am going to reveal exactly how you can set up a "lifetime earning stream" that is more dependable than the interest you get on your savings account.

Forget what you have heard about how risky gambling is and let me share with you some of the most important news you will ever receive.

The Target 7 Craps Strategy is a proven strategy that my associates and I safely win thousands of dollars every week we play craps.

In fact, our method is so reliable that we can play any craps game, and, in a matter of just a few minutes, create a nice profit and walk away with all of our winnings intact.

This strategy is being used right now by a group of dedicated players who quietly and safely extract thousands of dollars every hour from casinos that cannot stop our system from working.

I am talking about the 100% tested and proven Target 7 Craps Strategy. This is the same highly dependable and very consistent system that my friends and I use to . . .

1. Win $161.80 an hour in land-based casinos, hour after hour, day after day, and week after profitable week!

2. Consistently make as much as $3,336.65 an hour playing on the Internet. What’s more, we can make these amounts consistently and with very little risk of losing.
3. Build up our bankrolls to higher and higher levels that multiply our "earning rate" even higher.

4. Create reliable sources of income that are very dependable.

And, this is just the beginning . . .

The *Target 7 Craps Strategy* is a perfected strategy that has been exhaustively tested and is guaranteed to work. And, it is so predictable that once you learn it you can actually plan on how much your "hourly winnings" will be.

Furthermore, it is so consistent that I can tell you when you use it, you will make an average return as high as 225% an hour on the amount of money you "invest" in any game.
If you are a $50 don’t come bettor, averaging $161.80 an hour in land-based games, you can give yourself an immediate raise by playing on the Internet and pulling in an average $484 an hour playing exactly the same way at the same betting level.

And, if you really want to move up to the big leagues, I will show you how you can move up to $323 or even $968 hour in land-based casinos.

If you want to "take it easy" and just play from home, you'll learn how to quickly build up your winnings to from $484 to an astounding, but real $3,271 an hour!

These winning rates are based on documented winnings I have on file and not speculation. If others can win these amounts, you can too!
Once You Learn This Strategy, You Can Make Financial "Windfalls" Every Day!

Les T. lives in Tyler, Texas and uses the Target 7 Craps Strategy. He said –
“The Target 7 Craps system is by far your best system. It has everything –
“It is easy to learn and it is a very reliable winner.

Russ C. never played craps before he got this course. Here’s what he says –
“I am having great results with this system. My winnings are 75% to 80% of the total system’s winnings and using just the ‘three bet combo’ is really easy.

“I heartily recommend this system to anyone who wants an easy way to make money in a casino. My win record so far is perfect – six winning trips and no losing ones.

“This is by far the best gambling system ever created. I congratulate you and your hard working associates on what is undoubtedly your best system yet.”

I could go on and on telling you about how the Target 7 Craps Strategy is producing extraordinary profits for ordinary people.

George K. lives in Cudahy, Wisconsin. He shares his experiences –

“I play in local casinos and I have not had even one losing craps session. Last night I made over $9,400 in less than half an hour off of a hot shooter. I was already up using the standard system when I got the ‘hot roll signal’ and I decided to follow it.

“Even though I was skeptical, the ‘hot roller’ part of the strategy is just as good as the rest of it.”
Ron C. is a stock trader and appreciates how Target 7 Craps resembles a good trading strategy. He wrote –

“I am a successful stock trader and the keys to my success trading are good entry signals and using tight top losses to keep losses low.

“The Target 7 Craps Strategy works along the same lines. I have been using in online for the past three weeks and I am happy to report profits of $34,000.

“The consistency of this strategy is commendable. Great system!”
Start By Learning the Target 7 Craps Bets

You don't have to learn a complicated betting strategy to win.

In fact, it doesn't matter if you know "beans" about the craps game.

Our system is so reliable that you can start winning with zero knowledge about the game and with almost no money.

"To get started, you only have to learn how to make three bets at craps."

That's it for learning the Target 7 Craps Bets. Just learn how to make bets at the same time, and you will be on the way to making a very handsome income.

"How handsome?" you are wondering.

Well, our files show the following . . .

If you learn the Basic Betting Method, consisting of the Target 7 Craps Bets, you will -

- Make $96.80 an hour as a $30 Don’t Come bettor in a land-based game.
- Make $484 an hour making $30 Don’t Come bets in an online game.
- Make $322 an hour betting $100 Don’t Come bets in a land-based casino game.
- Make $1613 an hour using $100 Don’t Come bets in an online casino.
- Make $968 an hour making $300 Don’t Come bets in a "brick and mortar" casino.
• Make $4,839 an hour as the $300 Don’t Come betting level in an Internet casino.

The Target 7 Craps Strategy consists of a unique strategy that put the most common number at craps, the 7, on the side of the player.

The Target 7 Craps Strategy It is a highly refined, yet very easy-to-use strategy that is a proven winner at craps.

It is not complicated. There is no betting series to keep track of.

It is not simplistic like some systems that use outdated and discredited "old-time" gambling systems.

It is a scientifically-derived method of play that tells you exactly how to make every play.

With this method, there is never any guessing about how much money to wager.
You will never have to guess where to make your bet or how much to bet.

And, here is something really remarkable. You will know exactly when to quit every game.

Here are some of the reasons so many players love this strategy:

- It is a very low stress way of playing. You can totally relax, talk and sip on your cocktail using this simple by highly effective system.

- It doesn't require any judgment. Many systems require that you constantly make adjustments in your bets and that you concentrate on everything around you at all times. This isn't so if you are a Target 7 Craps player.
• You don't have to follow trends to use it. Many systems work only if a table is "hot" or "cold."

By making the bets as described in this strategy, you won't care what the table is doing.

You never have to case a table. I really detest books that promise the world and then, on some page 113 or in some appendix the real truth is found. Their whole system is based on finding just the "right place to play." The trouble is, in the real world, these tables can't be found often enough to develop consistent winnings. With the unique Target 7 Craps Strategy you can play anywhere, anytime you want without fear.
The Power of "Hit and Run" Gambling

Every aspect of the Target 7 Craps Strategy is geared to short-term or what gamblers call "Hit and Run" play.

Most games in land-based casinos last about 45 minutes, but can be played for even shorter times if you so choose.

Internet games are much quicker, usually less than 10 minutes. However, the system is so flexible and reliable that you can play for as little as five minutes and still rack up a win.

Every game has a suggested "Target Amount" of winnings. You can play longer if you like or settle for a smaller target and play a shorter game. No other system is this precise.

Because it is a "Hit and Run" Strategy, you will have complete control over your play.

Where you play craps, how much you invest in a game and how long you play all affect how fast you can win with this strategy.

Stated quite simply, the faster the game and the higher your betting level, the quicker your profits will mount up.

When you use the Target 7 Craps Strategy, nothing is left to chance. Even the amount of your winnings for a game are planned in advance.

The way the strategy is constructed, your "Target Wins" will become higher as your basic bet increases.

- If you use a $100 Game Bankroll, you will play for $33 Target Wins.
• With a $300 Game Bankroll, your Target Win will be $100.

• And, as you increase your level of play as your winnings, build you Target Win per game will increase.

I am sure you can see the potential here. Once you set up your own "moneymaking machine" using the Target 7 Craps Strategy, you will have complete control over how much money you make.

If you want a raise, just play a little longer or play at a higher level.
Hourly Winnings

One of the best features about the *Target 7 Craps Strategy* is its predictability.

While anything can happen over the next few craps rolls, as you play longer using the strategy, the results become more and more predictable.

After playing thousands of games in casinos as well as playing thousands of simulated games on computers, we determined that the hourly winnings were pretty much dependent on:

   a. The speed of the game and  
   b. The size of your bets.

So long as you apply the strategy correctly, your hourly wins will fall within a narrow average, which is very predictable.

Assuming an average table speed of about 50 rolls per hour for play in a land-based roulette game and 250 spins per hour for online play, the amount you can win per hour is strictly dependent on the size of your bets, which is determined by your bankroll.

This is very straightforward and simply means that if you play with black $100 chips, you should expect to win more than a player betting with green $25 chips. Likewise, the green chip player will average winning more than the red $5 chip player.

Table 1 shows the relationship between hourly winnings and the level of bankroll used at a table averaging 50 bets per hour, the average rate of play for land-based games and 250 bets per hour, the average rate for online craps games.
These illustrations are based on the actual results obtained in thousands of games played in real casinos.

While this table, as well as the ones which follow, show the amounts you can win over different time periods with different amounts "invested" in each game, **there is nothing hypothetical about the Target 7 Craps Strategy’s win rates. These amounts are based on actual casino games.**

The table shows what I consider to be a full day’s work gambling in a casino. I consider anywhere from three to five hours a day a full day's work in a casino. Before you discount this statement, remember we are talking about risking your money in an atmosphere strictly geared to make the removal of your money as painless as possible. Beating the casino at its own games is never a cakewalk, and the shortest amount of time you take to do so will help you reduce the effect of the many psychological ploys the casino has devised to relieve you of your money.
So, at least in my experience, if you bang heads with the casino for three to five hours, lock up your winnings and walk out the front door a winner, you have put in a full day's work.

Anyway, getting back to Table 2, with a $100 buy-in, you can win $45 if you play for three hours, $60 if you play for four, and $75 if you stick it out five hours. As you increase the size of your buy-ins, your base bets will increase and your hourly winnings will grow.

With a $2,000 buy-in, you can win $1,600 day if you play five hours.

Buying in for $4,000 and playing five hours a day you will win $3,225.

With $6,000 used as your Game Bankroll, your winnings will average $968 an hour. Play three hours a day at this level and your winnings should average $2904. And, five hours a day will bring in a cool $4,840!

Table 3 shows win rates for play in the faster online games, at an average speed of 250 rolls per hour.

Time and Money

Tables 4 and 5 are set up to help you make a decision on how you want to accomplish the goal of making a set amount of money each week, every month, or any other time period you want to use.

Let's assume that you have practiced the *Target 7 Craps Strategy*, seen how effective it is, and now want to use it to supplement your income. These tables show some options on how you might decide to meet your goal.

</table>

You can easily determine the relationship between the size of your bets and your weekly earnings using these tables.

Let’s assume that you prefer playing in a local casino. You decide to play making $30 bets.

Table 4 shows you that if you play craps 30 hours a week you will make $2,880.

You probably don’t want to spend that much time playing craps. Looking at the same table, you see that making $200 bets you will make $12,900 for 20 hours play.

While this sounds better than playing for 30 hours, looking at the column for $200 play, you can see that this offers a much better return for your time –

Ten hours a week of making $500 minimum wagers will bring in $9,680 on the average.
Since online craps is a much faster game, the hourly winnings are much higher than for comparable levels of play in a land-based casino.

Looking at Table 5, you can see that playing 30 hours a week, making $5 bets online will bring you $2,310 a week for your efforts.

However, you probably won’t want to play 30 hours a week online. That’s why you will want to move up in play as quickly as possible.

Once you move up to making $30 minimum bets online, just 20 hours a week will make you over $9,680 in net profits.
What Does It Take to Make $10,000 a Week?

As we have seen, we need to look at different rates of play and betting levels in comparing online play and play in a land-based casino.

If you goal is to make $10,000 it can be accomplished in different ways. Table 6 below shows the time requirement, at different levels of play, to win $10,000 a week playing craps in a land-based casino.

<table>

</table>

Table 7 below show the time required to win $10,000 a week in an online casino.
If you want to make $10,000 a week it is far easier to do if you increase the size of your base bets. For instance, a $500 bettor, playing in a land-based game, can win $10,000 a week in about 10 hours of play. As a $200 bettor it would take 15.5 hours of play to win $25,000.

In online play, the same relationship applies. Here a $100 bettor can win $10,000 a week with just 6 hours of play.

The key to winning $10,000 a week is to start small and build your bankroll out of winnings. If may take several weeks to do this but it is far easier to win large amounts when you start with a larger bankroll and larger wagers.
Rules to Help You Keep Your Winnings

There is no question that if you follow the Target 7 Craps Strategy you will generate wins. I have even given you the average wins per hour achieved in actual play. Does this mean you can relax? Unfortunately no. Even though there is no question that you will win using this system of play, there is still the issue of leaving the casino with your profits in hand.

One of our most important rules to help you leave a winner is the 90% Rule. This rule says very simply that if you are close to hitting a target profit or a daily profit, that sometimes 90% or so is close enough.

I recall very well an acquaintance of mine who had a monster roll at a craps table. When I walked up to the table, Joe was rolling the dice and playing with $500 chips scattered all over the layout. By the time he sevened out, he was up over $48,000. This is not bad considering he bought in less than an hour earlier for a grand. I strongly urged him to come with me and take a break. I reminded him how badly he needed this score and how good he would feel walking out with his winnings intact. He nodded and smiled and then gave some lame excuse about wanting to bet with just a couple more shooters.

I had more than made my nut for that day. In fact, catching the last ten minutes of his hot craps roll had put me way ahead. I decided to take a break in the coffee shop and try some of the coconut cream pie which was reputed to be the best in town.

I ran into another friend and talked for over an hour. When I came back out, Joe was still at the same table. I walked up and noticed his pitiful little pile of green chips. Joe gave me a lame look and continued to play. I saw him the next day and asked him how he ended up. "Tapped out," were his words. "You didn't drop the whole 50 grand did you?" I asked.
"It was only 48 thousand," he responded. "The reason I kept playing is because I wanted to hit 50 thousand."

As I walked away, I wondered to myself what in the hell is the difference between 48 thousand and 50 thousand when you are that much ahead?

I think 48 thousand should have been close enough, don't you?

Any time you are struggling to hit a target profit, are playing on a short time schedule or just start to hear that little nagging voice somewhere in the back of your skull telling you to watch out, you can remember Joe. He should have known that 48 grand was close enough. Don't ever get hung up on exact amounts. If you are trying to win $50 and hit $48, you can call it close enough and take a break. Remember that you will never go broke by taking a break early and walking off with your profits intact.

Whenever you are somewhere near your target profit for a game, you need to make some changes. Obviously you can just call the game over and quit. However, if the dealer has been busting at a high rate and the table is definitely player favorable, it makes no sense to quit. So you do the next best thing. You move into the conservative betting mode.

Living a Life of Ease

When you go to the casino, you need to remember that your one purpose is to win. You can drink, party, visit, flirt and relax on your own time after you have locked up your daily win. After becoming a proficient roulette player and increasing the size of your minimum wagers, you will be able to travel a good part of the year, courtesy of your favorite casinos. This may become an important part of your retirement plan. You can use your new skills at roulette to pay for your vacations and pocket a good deal of change as well.

You may consider becoming a full time pro. Before you make this step, I want you to think about it very carefully. Whereas playing several times a month and winning can bring you a great deal of pleasure, having to play every day to make your daily nut is very difficult.

Casinos can be glamorous and exciting if you don't have to be in one every day. On a daily basis, I can think of many things I had rather do than go through the repetitive grind of play needed to hit my daily win goal. Everyone is different. If you think you would like to turn pro, I suggest you take a two week vacation and spend at least ten of the days in a casino playing roulette four hours a day. If, after two weeks of this, you are still game for more, then maybe you have what it takes to become a full time player. If you are like me, you may have to settle for being a part time pro and playing less frequently.
I hope you find the Target 7 Craps Strategy to be a lifetime source of income and satisfaction. I would like to hear about your experiences. You may write me in care of the publisher. I wish you the best in all of your life endeavors.
